

# **Evidence-based Policymaking**

---

Sachin Chowdhry

# Coverage

---

- Rationality in Policy making
- What is evidence based policy making
- Increasing use of data driven evidence
- Big data and data analytics
- The road ahead

# Rational Model of Policymaking

---

- Rational model seeks
  - to learn all the value preferences extant in a society,
  - assign each value a relative weight,
  - discover all the policy alternatives available,
  - know all the consequences of each alternative,
  - Cost benefit analysis, and
  - select the most efficient policy alternative

(Henry, 2004:314)

# Evidence-Based Policymaking (EBP)

---

- The term EBP gained political currency under the Blair administration in UK since 1997.
- It was intended to signify modernising mandate.
- It aimed at replacing ideologically-driven politics with rational decision making.

# Advantages of EBP

---

- It helps making well informed decisions about policies, programmes and projects by putting the best available evidence from research at the heart of policy development and implementation'
- Evidence supports rational analysis.
- It advocates a more rational, rigorous and systematic approach.

# We need evidence to

---

- Understand the policy environment and how it is changing,
- Appraise the likely effects of policy changes so we can choose between different policy options and subsequently assess their impacts,
- Demonstrate the links between strategic direction, intended outcomes and policy objectives, and
- To show that there are clear lines of argument and evidence between what we are aiming for and what we are doing now.

....contd.

---

- Determine what we need to do to meet our strategic goals or intermediate objectives.
- Influence others so that they help us achieve our policy goals and take them through to delivery.
- Communicate the quality (breadth and depth) of our evidence base to meet the open government agenda.

# Issues in the use of EBP

---

1. What evidence is used in the policymaking process?
2. How evidence is incorporated into policymaking.
3. Evidence is not the only factor which influences policymaking.

# Factors influencing evidence

---

# Overcoming the influences

---

- Thrust to big data and data analytics to overcome these influences. Three themes are emerging-
  1. the role that institutional capacity has within government to utilize big data analytics;
  2. government use of big data analytics in the context of digital public services; and
  3. the way that big data information enters the policy cycle, focusing on substantive and procedural policy instruments.

# Integrated Disease Surveillance Programme

---

## **Objectives:**

To strengthen/maintain decentralized laboratory-based IT enabled disease surveillance system for epidemic-prone diseases to monitor disease trends and to detect and respond to outbreaks in early rising phase through trained Rapid Response Team (RRTs).

# Programme Components

---

- Integration and decentralization of surveillance activities.
- Human Resource Development – Training of all concerned officials.
- Use of ICT for collection, collation, compilation, analysis and dissemination of data.
- Strengthening of public health laboratories.
- Inter-sectoral Co-ordination for zoonotic diseases.

# Applications of GIS

---

- Find geographical distribution and variation of diseases
- Analyse spatial and temporal trends
- Identify gaps in immunisations
- Map populations at risk and stratify risk factors
- Document health care needs of a community and assess resource allocations
- Monitor diseases and interventions over time

....contd.

---

- Manage patient care environments, materials, supplies and human resources
- Monitor the utilisation of health centres
- Route health workers, equipments and supplies to service locations
- Publish health information using maps on the Internet
- In Locating the nearest health facility

# Examples:

## Health Sector: Disease Mapping

Chakardharpur subdivision  
of the West Singhbhum  
district of the Jharkhand

Malaria Hotspot Analysis

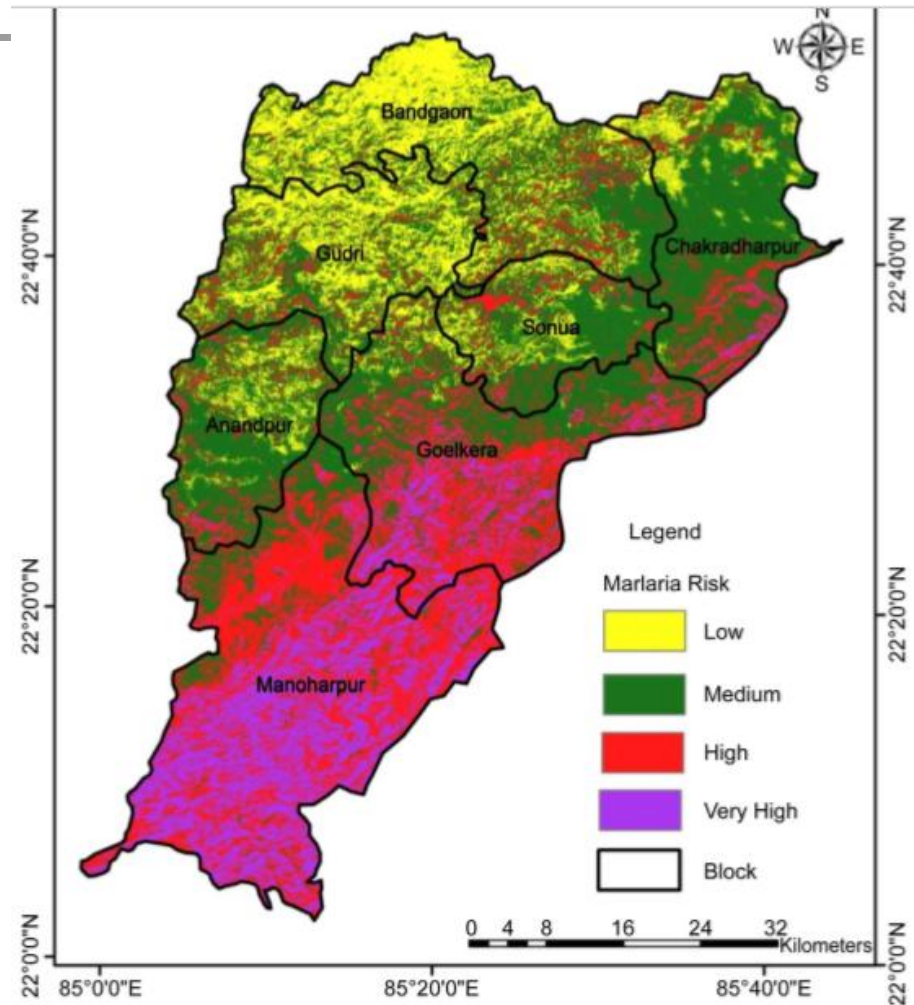

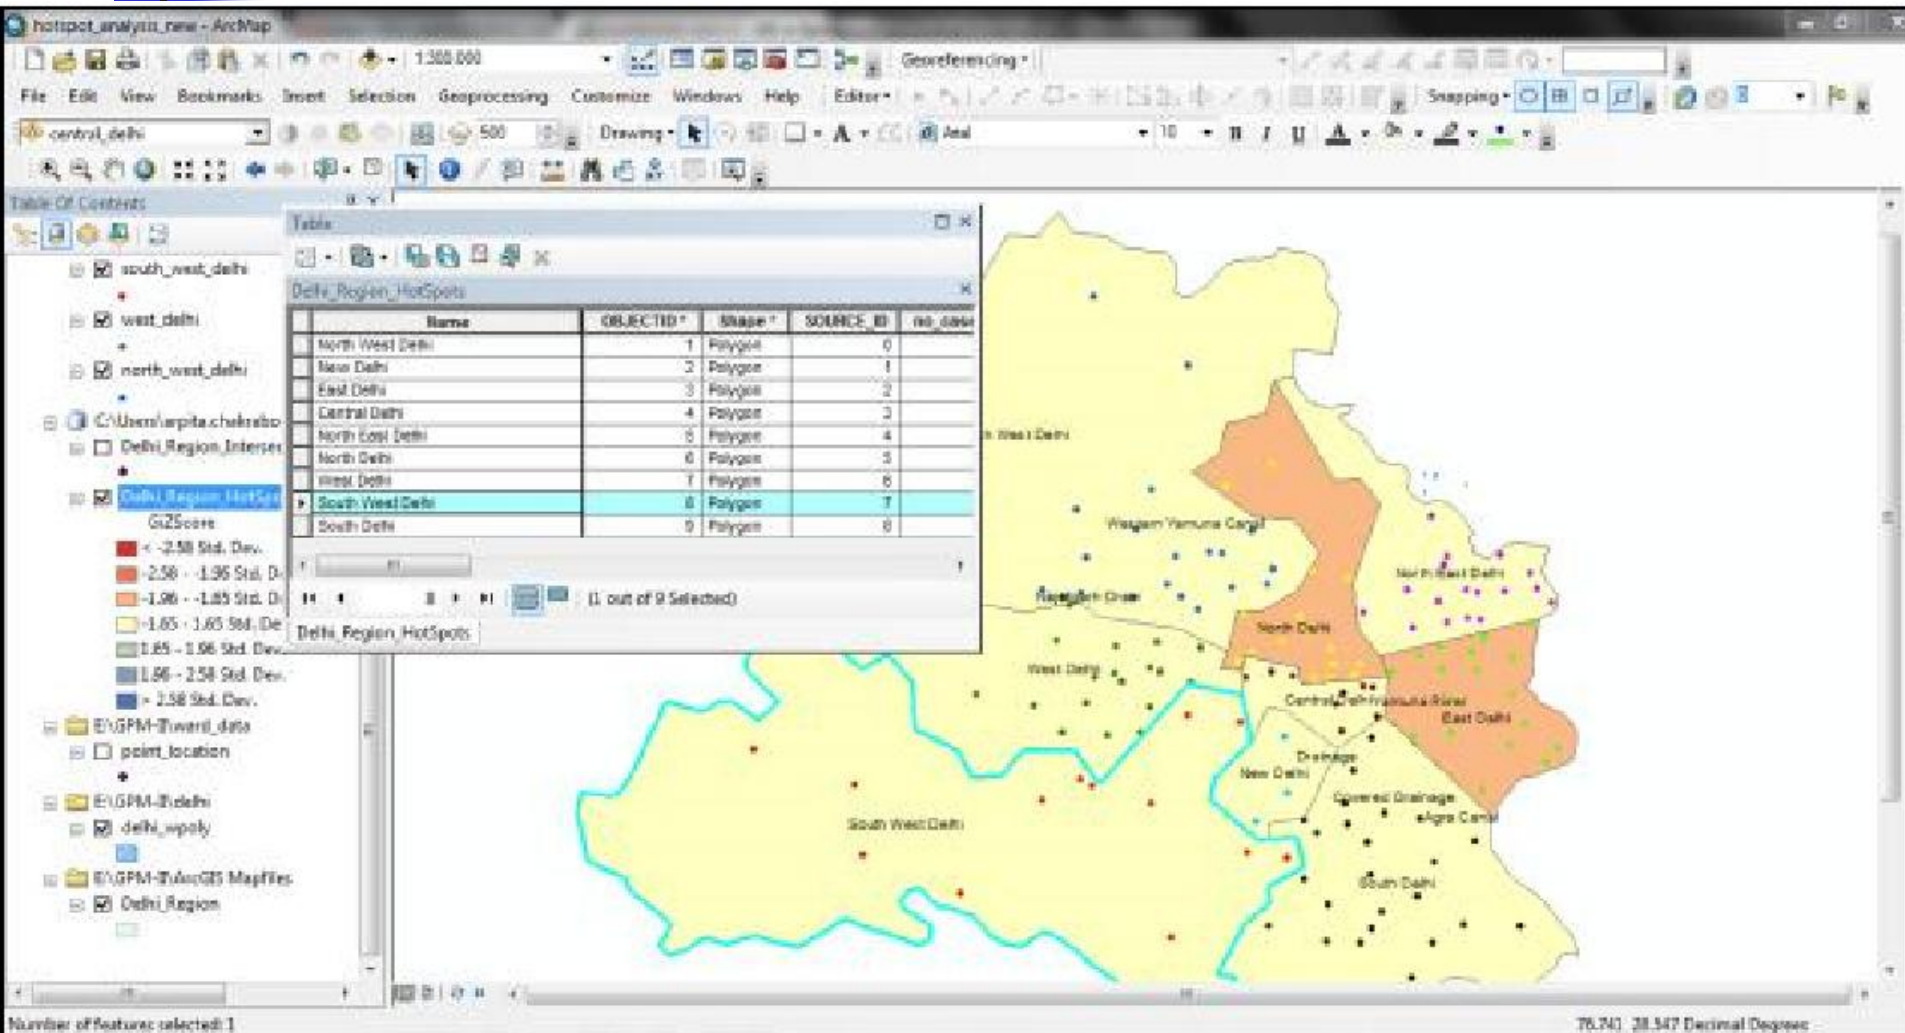

Figure 7. Malaria integrated risk map.

# East and North Delhi Hot spots for Dengue cases

# Evidence based action in COVID-19

---

- Containment plan in clusters posing high risk of further spread based on data.
- Mathematical modelling studies to support the strategy.
- Zoning of all the districts in Red, Orange and Green based on numbers reported from each of the places
- Testing and medication on the basis of results seen in other countries.

# Randomised Controlled Trials

---

- Controlled trials can bring rigour to the process of determining what works — and what does not — in public policy.
- RCTs are the so-called gold standard of evidence-based policy.
- In an RCT, participants randomly assigned either to receive an intervention or not (a control group).
- Comparison of two groups to analyse the effects of a policy.

# RCT in India

---

- Abhijit Banerjee and Esther Duflo applied this in India, especially in educational sector.
- Raised the prospect of RCTs as a means to help policymakers find realistic answers to questions at hand.
- Policymakers can be better prepared and informed for new policy intervention, or when evaluating and refining current interventions.
- However, it would require such experiments to be conducted on a large scale for a country like India.

# Future....

---

- Key to the success of the evidence based planning process and how effectively it can inform policy would depend on
  - The quantity and quality of the evidence base,
  - The way in which it is assessed, interpreted and fed into policy.
  - The extent to which it is contextualised, readily accessible and valued by policymakers.
- Prime Minister Modi said "Our aim is to make evidence-based policy-making an integral part of governance by the year 2022. It will also help in creating a new identity of New India".

---

**Thank you**
