

ACKNOWLEDGEMENTS

My litany of debts must begin with a vote of thanks to the Government of India for sponsoring me to the 34th APPPA course. The director, IIPA, Shri B.S. Baswan, course directors of APPPA, Profs. Dolly Arora and Dr. S.K. Ghosh, and all faculty members of IIPA have been great support throughout. The greatest contribution to this work, however, has been the access to insider's information of climate change adaptation in Governments of India and Orissa, especially the Orissa State Disaster Management Authority (OSDMA) and Orissa Forest Department (OFD). Published and official sources are not able to provide high-quality data for village level analyses, and emergent trends must be investigated first-hand in the field. With the help of OSDMA and OFD teams, I was able to visit several of such villages, which fitted very well in my research design, in such a short period that was not possible otherwise. A big thank you to colleagues in OFD - Ajay Mahapatra, Lingraj Otta, and Rajesh Gopal Nair.

My biggest debt, however, is to my research villagers in Billipada, Sutana, Baliguali and Anjira, and their Gram Panchayat representatives who put up not only with my constant queries but spared me the obligations of a government servant who is expected to extend state's welfare measures in each village he visits.

No enquiry could be complete without insightful comments, additional queries and criticism by the peers. In this respect, my deep debt lies with Dr. Prodipto Ghosh, Secretary (retd.), Govt. of India and an expert on climate change and Shri K.B. Thampi, IG(Forests), who also persuaded me to choose this topic in spite of my previous inexperience.

The research design was presented at a session organised by Prof. Aasha Kapur Mehta where critical comments helped me refine the research questions and the methodology of data collection. Fellow APPPA participants read through drafts of my dissertation, never failing to come up with useful advice. To them, I owe much intellectual debt.

My greatest debt is owed, however, to Prof. Vinod K. Sharma, research supervisor, advisor, and a great friend. His encouragement to write this dissertation in the first place, and support throughout this period while allowing me the widest latitudes to develop my ideas has left an indelible mark on the way I now want to conduct my own professional life.

My wife, Nishi, managed my social and personal obligations while I was busy working on this dissertation. She also took the sole responsibility of my son's preparation for the final Secondary School Board Examination 2009. Without her loving support, it was *impossible* to work on this dissertation.
