

Question 1

Question text

The northwest corner rule requires that we start allocating units to shipping routes in the:

Select one:

- highest costly cell of the table.
- middle cell.
- Upper left-hand corner of the table.
- Upper right corner of the table
- Lower right corner of the table

Question 2

Question text

The transportation model of linear programming assumes homogeneous commodities, deterministic supply, deterministic demand, that every source is capable of shipping to every destination, and that there is a known per-unit shipping cost from every source to every destination.

Select one:

- True
- False

Question 3

Question text

A transportation model must have the same number of rows as columns.

Select one:

- True
- False
